SUMMARY

Mobile Developer with 4+ years shipping production mobile apps across fintech, e-commerce and EdTech. Specialise in offline-first architecture, multi-gateway payment integration and Clean Architecture at team scale. 12 apps live on the App Store and Google Play, most recently a fintech product serving 20,000+ users at 99.4% crash-free sessions.

SKILLS

Mobile: Flutter, Dart, Kotlin, Java

Architecture & State: Clean Architecture (MVVM), Feature-First, BLoC, Cubit, Riverpod, GetX, Provider, SOLID Principles

Backend & Integrations: REST, GraphQL, WebSockets, Firebase (Firestore, FCM, Auth), Supabase, PowerSync, Node.js, OAuth / JWT, payment gateways, Google Maps SDK, Google Maps, Notifications, and AI tools.

Platform & Delivery: CI/CD (continuous integration & delivery), App Store Connect, Google Play Console, TestFlight, Git / GitHub / GitLab, Figma, Agile / Scrum

Testing & Quality: Unit testing, widget testing, integration testing, code review, Crashlytics,

Working knowledge: TypeScript, JavaScript, SQL,

EXPERIENCE

Bixo Soft | Senior Flutter Developer
July 2024 – Present

- Shipped six production Flutter apps across fintech, e-commerce and EdTech for iOS, Android and Web.
- Built an offline-first architecture with PowerSync, encrypted local storage, biometric authentication and role-based access control (RBAC), keeping core flows fully usable without connectivity.
- Integrated multi-gateway payment processing and real-time event streaming with sub-second sync latency, handling 15,000+ transactions per month.
- Set the Clean Architecture and state-management standard now followed by four developers on the mobile team, and review feature branches against it.
- Automated iOS and Android releases with Fastlane, cutting deploy time from 2 hours to 15 minutes across 30+ store submissions while holding crash-free sessions above 99.4%.

Gteksol | Flutter Developer
May 2022 – July 2024

- Sole Flutter and React Native developer on six end-to-end projects, owning technical design, third-party integration and store releases across Android, iOS and Web.
- Built multi-app e-commerce and real-time systems on Firestore, Cloud Functions, WebSockets and Maps/Geolocation, powering live order tracking, in-app messaging and cross-device sync.
- Cut cold start from 3.1s to 1.4s using the Hermes engine, MMKV caching and TurboModules, and reduced memory footprint by 22%.
- Architected state and data layers with BLoC, Riverpod, Zustand and TanStack Query, standardising four codebases on one rendering pattern.
- Automated release pipelines with Fastlane and Firebase, shortening the release cycle from two weeks to three days.

Alrehman Solutions | Android Developer (Internship)
February 2021 – May 2021

- Built a blog application and an employee tracking system in Java and Kotlin, working in an Agile team; fixed defects and delivered performance improvements across both Android codebases.

SELECTED PROJECTS

Ohana Africa — Group money-pooling fintech for African communities; multi-gateway payments. iOS · Android

Salveowell — E-commerce app for a Philippine health and wellness brand. iOS · Android

SWAPP Members — Distributor and member portal for Salveowell, with role-based access. iOS · Android

SWAPP Academy — Training and course delivery app for SWAPP distributors. iOS · Android

EDUCATION

BS Computer Science — Government College University, Faisalabad · 2016 – 2020
